Mohamed Salem

Nottingham, UK | muhammadshehawi@gmail.com | mohamed200303.github.io | github.com/Mohamed200303

PROFILE

First-year Computer Science and Artificial Intelligence student at the University of Nottingham, aiming for machine learning engineering and quantitative development. Comfortable in Python and C, learning C++, and building in public.

EDUCATION

University of Nottingham, BSc Computer Science and Artificial Intelligence — Sep 2026 – 2030 (expected)

Harvard CS50x, Introduction to Computer Science (online) — 2026 – present

PROJECTS

Personal portfolio website, mohamed200303.github.io — Nov 2026

HTML, CSS, JavaScript, GitHub Pages. Built with AI pair-programming.

- Framework-free personal site, deployed on GitHub Pages and updated through GitHub; all of its code is about 30 KB compressed.
- Interactive hero: a 26-neuron, 127-connection neural network drawn in 3D on a 2D canvas, which visibly trains on load and relearns when a visitor perturbs its weights.
- Project cards, case-study pages and a Cmd+K command palette are all generated from a single data file; live GitHub statistics use caching and fallbacks.

StudentOS, an AI-powered web app for university life — In progress

Python, Flask, SQLite, Claude API. Planning stage; Version 1 to be built over winter 2026–27.

- Version 1: AI flashcards and quizzes from lecture notes, a deadline and exam planner with AI revision timetables, and a student budget tracker.
- Later versions: career tools, an arrival kit for international students, and campus community features.

SKILLS

Programming: Python, C; learning C++

Tools: Git, GitHub, Linux command line

Studying: Machine learning, data structures and algorithms, linear algebra, probability

ADDITIONAL

Languages: English, Arabic

Interests: Football, gym, chess, reading, maths puzzles

Writing: Essays and short notes on AI and learning, published at mohamed200303.github.io
